

Get More. Do More.

ZEBRA'S POWERFUL 2D IMAGING SOLUTIONS FOR MANUFACTURING AND WAREHOUSING.

Get More technology ZEBRA'S RUGGED 2D IMAGERS PROVIDE ACCURATE INFORMATION TO INCREASE PRODUCTIVITY IN INDUSTRIAL ENVIRONMENTS

Real-time access to your business data – from every inch of your warehouse or manufacturing space – is vital for success. Productivity depends on your workers having the information they need to streamline manufacturing processes or to pick, put away and replenish stock more effectively. 2D Imagers help deliver flawless fulfillment, to give you the accurate visibility throughout your operations and turn it into revenue faster. They capture real-time information so you know exactly what you have and where it should go, allowing you to effectively manage the changing needs of your customers and drive growth opportunities.

Keep your workforce productive and your processes streamlined

Easy capture of all barcodes

Increase productivity with one device that can read all industry-standard barcodes – 1D and 2D. Zebra 2D Imagers can handle whatever comes their way, including reading damaged barcodes or scanning in very light or dark environments. Even when covered in grease or dust, they still work well and deliver the same reliable results.

Read multiple barcodes

When you need to capture important product information embedded in multiple barcodes on a package or work order, Zebra's multi-code technology makes it a quick and easy task, reading multiple barcodes in a single trigger pull.

Omnidirectional scanning

Faster scanning is simple when there's no need to align the device or barcode.

Enhanced range

Barcodes can be scanned across a wide range of distances, as far as 30 feet away, so worker productivity and production line efficiency aren't disrupted by having to move closer to items.

Rugged Form Factor

Industrial environments need rugged imagers built to withstand heavy use and harsh conditions. Our rugged devices combine industry-leading data capture technology with an exterior virtually impervious to damage.

Do More Business

ENABLE FASTER AND MORE EFFICIENT PROCESSES

Unbeatable performance

Zebra's market-leading 2D Imagers provide the performance needed to support the industrial applications that help you connect to real-time information.

1. TRACK AND TRACE

2D barcodes identify components throughout the manufacturing process.

- Easy to see component details, including serial number, date of manufacture, lot number, manufacture location etc.
- Quarantine bad lots – and identify shortages, discrepancies or damage before they affect warehouse processes or production.

2. WORK IN PROCESS

Barcodes enable tracking of all materials and partly-finished products throughout the production process.

- Tracking ensures the right parts are in the right place at the right time, improving productivity and streamlining operations.
- Optimizes the flow of goods and materials and identifies any productivity issues.

3. SHIPPING AND RECEIVING

Shipping labels often include multiple barcodes – such as a mix of 1D and 2D codes.

- Zebra 2D Imagers provide simultaneous scanning, which enables shipments to be identified and verified in real time.

4. PICK AND PACK

As labels often have different barcode types, a scanner that can capture both 1D and 2D simplifies picking, packing and shipping orders.

- As Zebra 2D Imagers read all barcode types workers can respond quickly to changes in production demands and errors, and bottlenecks are reduced.

Why Choose Zebra 2D Technology?

Some of the largest manufacturers and warehouse operators in the world rely on the proven, superior quality of Zebra 2D Imagers.

2D imagers designed for every industrial environment – a broad portfolio varying in size and portability includes handheld, hands free, hybrid and rugged imagers.

Great Zebra 2D Imagers for manufacturing and warehouses

DS3508 – rugged, corded imager

DS3578 SR – rugged, cordless imager

DS3578 ER – cordless extended range imager

We are the market leader – pioneers in barcode research for over 35 years, we have over 2000 years of collective experience among our research and development team. Our long history of firsts includes the very first rugged barcode scanner.

Everyday technology that's simple to deploy – Zebra's 123Scan² utility makes configuring your imager quick and easy. SMS, our Remote Scanner Management tool, lets you manage your imager fleet from a central location. And our Software Development Kit gives you the flexibility to truly customize your solution for specific tasks and systems.

Built for industrial environments – our scanners are designed to work reliably in the most demanding industrial environment.
